- ☑ Organize and manage asset more effectively and efficiently
- ☑ Consolidate key asset and service management processes
- ☑ Optimize asset reliability and performance

SAMS ASSET MANAGEMENT

Focusing your business

Integrated with Maintenance Management

Visibility provides an enterprise-wide view of asset details and processes from across the organization—including visibility into asset service processes across the enterprise supply chain.

SAMS - Asset Management collaboration makes it possible to achieve optimum results when using modern maintenance methods.

Key Benefits

- Effective asset management
- Easy to manage multiple asset locations
- Track all asset events
- Asset classification
- Scheduled maintenance

Why SAMS - Asset Management ?

• Full control over your assets

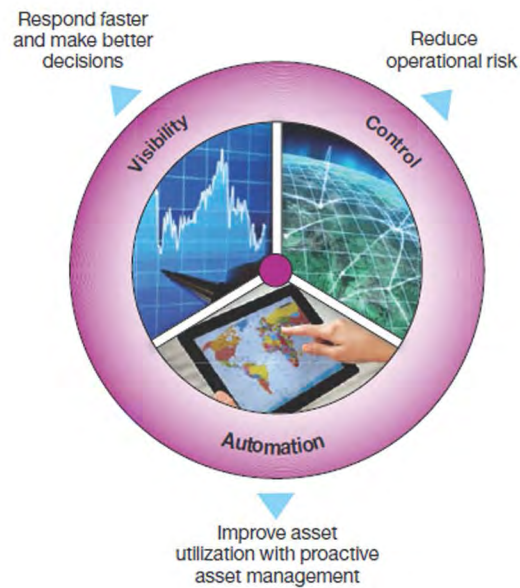

The SAMS Asset Management System provides management information as appropriate to the needs of users. a menu of user definable standard reports quickly show inventory, stock movements, scheduled activities, overdue activities, equipment failures, capital replacement costs as well as numerous other financial and management reports.

• Inventory

provides inventory information showing what assets have been allocated to locations, jobs and people.

• Defect Management

system shows what assets require repair, the status of the repair and anticipated completion date together with details of work undertaken and costs.

Gaining asset management benefits with visibility and control your business

In order to manage the full asset life cycle and better address business imperatives, asset-intensive organizations require integrated visibility and control across their business. This can help them better achieve their business objectives and maximize the value from all assets supporting the operation.

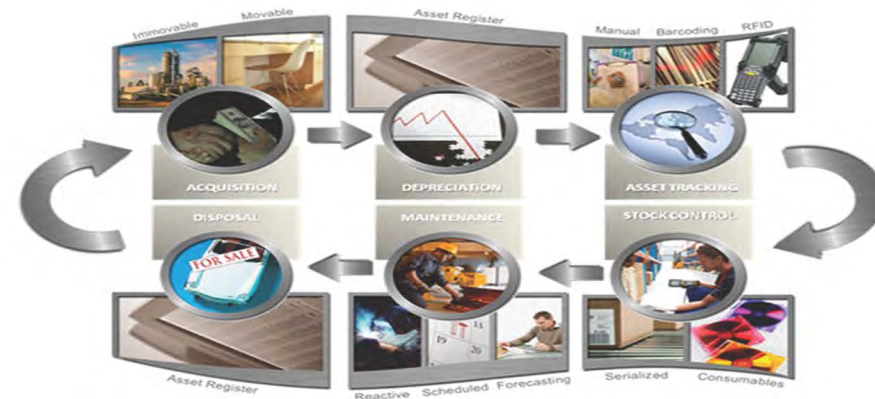

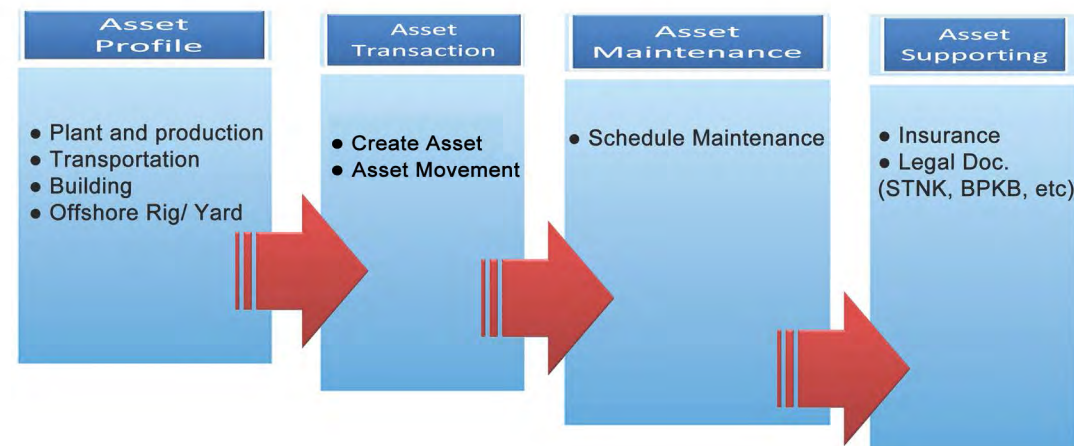

ASSET MANAGEMENT

SAMS - Asset Management

helps for better plan and find the optimum balance between maintenance and operations. This will help to increase the uptime of your assets and reduce inventory costs to increase your profits

LifeCycle Process

- "• Manages all fixed and consumable assets from initial purchase through to final disposal."
- "• Helps control or eliminate overstocking and stockpiling, and can also help reduce the organization's fixed capital investment and contribute to positive, bottom-line results."

With better control of their assets and asset-related data, organizations can:

- Better manage and secure their investments
- Increase governance and reduce operational risk
- Extend asset life, reduce inventory costs and control spending
- Mitigate compliance issues and risk
- Build agility and flexibility into their operations
- Improve asset utilization with proactive asset management and consolidation of their systems
